Aspiring Data Analyst and IT Support Technician with experience in analyzing and visualizing data to support decision-making processes. Skilled in Python, SQL, and data visualization tools such as Tableau and Microsoft Excel. Experienced in deploying IT systems, performing data cleaning and transformation, and collaborating with cross-functional teams to extract actionable insights. Passionate about leveraging data to drive business improvement and strategy.

Technical skills

- **Data Analytics & Visualization:** Python (pandas, NumPy, matplotlib, seaborn), SQL, Tableau, Microsoft Excel
- **Programming:** Python, C++, C
- **Networking & IT Support:** Communication, Connectivity, Troubleshooting, VPN, Routing, Cisco Packet Tracer
- **Security:** IT Security, Intrusion Detection, Vulnerability Scanning (Greenbone, OSSEC HIDS)
- **Operating Systems:** Windows, Kali Linux, Ubuntu
- **Administration:** Active Directory, Server Administration, Backup and Recovery

Education

Computer Engineering Technology

Expected Graduation: **April, 2025**

Fleming College

Projects

Project 1: IT Support & Data Analysis for System Security

Conducted log analysis to identify vulnerabilities in system protocols like SSH and FTP, improving system security. Developed reports with actionable insights and presented findings to stakeholders. Documented preventive measures and trained team members on secure configurations.

Tools: NVD, CVE websites, Python, ticketing systems

Project 2: Deployment of Host Intrusion Detection System (HIDS)

Configured and deployed OSSEC HIDS to monitor and respond to security incidents. Analyzed data to detect anomalies and collaborated with teams to fine-tune detection rules, reducing false positives. Used Python to visualize insights and strengthen threat detection.

Tools: OSSEC HIDS, Ubuntu, Windows, log analysis tools.

Project 3: Data Analysis for Web Application Monitoring

Performed vulnerability assessments for web applications using data analysis to detect and resolve issues. Used Retire.js to analyze JavaScript libraries and enhanced user experience by addressing security gaps. Collaborated with teams to improve system reliability.

Tools: Python, Netcraft, Retire.js extension, web vulnerability assessment tools.

Project 4: Data-Driven Asset Management

Conducted asset discovery and network data analysis to improve stability and reduce downtime. Performed vulnerability scans and collaborated with teams to resolve critical issues. Enhanced system performance through data-driven insights and reporting.

Tool: Greenbone (OpenVAS), Python, Excel, Angry IP Scanner.

Work experience

Express Auto Tech – Data Analyst

Sept 2022 – Sept 2023

Duties and responsibilities

- Analysed and interpreted large datasets to identify trends and support data-driven decision-making.
- Automated data cleaning, preprocessing, and ETL processes to ensure data accuracy and improve accessibility.
- Designed dashboards and visualizations using Python (matplotlib, seaborn) and Microsoft Excel to communicate KPIs effectively.
- Conducted predictive analysis to forecast trends and support IT resource allocation.
- Collaborated with cross-functional teams to address performance bottlenecks and optimize system operations.
